

**ANAHEIM, CA--(Marketwired - Aug 5, 2015) - Greengro Technologies (OTC PINK: GRNH ) announced today that it is accelerating the company's strategy to be the market leader in turnkey systems for advanced agriculture, and the medical and recreational cannabis markets. Last week the company announced the first in a series of planned light deprivation greenhouse systems to be offered in various configurations and price points to address a broader market.**

**According to CEO James Haas, "Greengro is aggressively working with strategic partners to help us round out our offerings and establish regional franchise models for our products to sustain our company's future as the leader for advanced agriculture systems. We are making solid decisions in response to market demand for turnkey systems instead of piecemeal components that have shown disappointing results to many early adopters. Our current pipeline of clients demanding these new advanced, efficient turnkey systems is in the millions of dollars compared to our traditional sales of a few thousand dollars per system."**

**Greengro is already working with industry brokerage and consulting firms to bring in Greengro company expertise and solutions early in the cycle of facility design, build out and ongoing management operations. To support the explosive growth expected in the \$300 Billion Cannabis industry, Greengro is in negotiations with nationwide outside sales firms to help its inside sales team design, quote and sell complete modular gro rooms, all new automated light deprivation greenhouse systems, and ongoing nutrient supply contracts.**

**Haas added, "Soon, we expect to offer leasing and financing options, as well as tailored crop and business insurance making us the first to offer the critical missing elements that currently prevent many clients from getting their business off the ground. We are confident that teaming with a national finance and insurance partner will bring many more customers and dramatically increase our long term market share and profitability in this market."**
